

Northern Energy & Supply

Environmental Policy

NORTHERN SKAGERRAK
DONSÖ
IMO 9817963

Purpose

Northern Energy & Supply (N-E-S) is committed to conducting its business in a responsible manner that contributes to sustainable development.

Through our activities involving the supply and distribution of fuels, lubricants, chemicals and marine environmental services, we recognise that our operations can have both direct and indirect environmental impacts. Our ambition is to minimise the negative environmental effects arising from our activities while creating positive environmental outcomes through the products and services we provide to our customers.

Environmental management is an integral part of our business strategy and shall be incorporated into all levels of decision-making and daily operations.

Scope

This policy applies to all activities, products and services undertaken by N-E-S, including the sourcing, storage, transport, distribution and supply of fuels, lubricants, chemicals and environmental services. It encompasses all business operations, support functions, logistics activities, marine operations, road transport activities, facilities and assets under the company's operational control.

N-E-S recognises that its most significant opportunities to influence environmental performance arise through product selection, supplier relationships, transportation, operational activities and the development of sustainable solutions for customers. Environmental considerations shall therefore be integrated into business decisions, procurement processes, service delivery and operational planning.

This policy also extends to our interactions with customers, suppliers, contractors and other business partners where N-E-S can influence environmental performance through its commercial relationships and ways of working.

Impacts, risks and opportunities

This policy is based on environmental impacts, risks and opportunities (IROs) identified within N-E-S.

The most important IROs are:

- Climate impact from products, transportation, logistics and vessel operations
- Sustainable product selection, including renewable and certified products
- Energy and resource efficiency
- Pollution prevention and environmental protection
- Handling and transportation of fuels, lubricants and chemicals
- Waste management and circular solutions, including sludge and oily waste recovery
- Sustainable procurement and supply chain management
- Protection of marine environments and biodiversity

These IROs form the basis for our environmental objectives, operational controls and continual improvement activities.

Focus on Sustainable Development Goals

12 Responsible Consumption and Production

N-E-S promotes responsible consumption and production through close collaboration with suppliers and customers to provide products and services with improved environmental performance. As an ISCC-certified company, we offer ISCC-certified products with verified sustainability and traceability throughout the supply chain. Through responsible product selection, sustainable procurement, efficient logistics and circular services, including the collection and management of sludge and oily waste, we support more sustainable choices across the value chain.

13 Climate Action

N-E-S supports the transition to a lower-carbon economy by providing products with reduced climate impact, including renewable and ISCC-certified solutions. We continuously assess opportunities to improve the environmental performance of our operations and logistics. This includes the operation of a hybrid-capable vessel, enabling reduced fuel consumption and lower greenhouse gas emissions compared with conventional operation.

14 Life Below Water

N-E-S contributes to the protection of marine environments through responsible vessel operations, pollution prevention measures and the collection and management of sludge and oily waste. By working to minimise the risk of spills and emissions, we support cleaner and healthier marine ecosystems.

Our commitment

Compliance and environmental protection

N-E-S is committed to complying with applicable environmental legislation, regulatory requirements and other compliance obligations. We work proactively to prevent pollution and minimise the risk of spills, leakages and emissions to land, water and marine environments.

Sustainable products and services

We promote products and services with lower environmental and climate impact. Through responsible product selection, close supplier collaboration and our ISCC certification, we provide sustainability-certified solutions with verified traceability throughout the supply chain.

Climate and resource efficiency

We strive to reduce the environmental footprint of our operations by improving energy and resource efficiency, optimising logistics and supporting the responsible use of natural resources.

Circular economy

We support circular economy principles through waste reduction, resource recovery and the responsible collection, management and treatment of sludge, oily waste and other waste streams generated within the sectors we serve.

Responsible operations

Environmental considerations are integrated into procurement, logistics, marine operations, road transport activities and business decisions. We work systematically to identify and manage environmental risks and opportunities throughout our operations.

Collaboration and continual improvement

We work closely with suppliers, customers and other stakeholders to improve environmental performance across the value chain. Through measurable objectives and continual improvement, we aim to strengthen our environmental management system and contribute to sustainable development.

Targets and fulfilment

Environmental objectives and targets are established through the annual Business Plan. Progress and performance are monitored through the Management System and reviewed during monthly meetings.

Allocation and responsibility

Management is responsible for ensuring that this policy is implemented, communicated and supported throughout the organisation.

Management is responsible for ensuring that relevant processes are aligned with the commitments of this policy.

All employees are responsible for understanding and applying the principles of this policy in their daily work and contributing to continual improvement.

Policy review

This environmental policy shall be reviewed at least annually and updated as necessary to ensure its continued suitability, effectiveness and alignment with N-E-S's business activities, environmental objectives and compliance obligations.
